

2. Rear Seat Entertainment System - overview

The Rear Seat Entertainment System (RSE) incorporates the latest in audio/visual technology, allowing passengers to watch a DVD within the rear of the passenger compartment.

The system is available as a kit and includes the following parts:

- Six-disc DVD changer
- Two 6.5" display screens
- Separate auxiliary panel
- Two wireless Bluetooth headphones
- Set of earphones
- Two leather storage bags for headphones
- Set of rechargeable batteries for headphones
- Battery charger
- Remote control
- Luggage compartment side panel

Each DVD changer is compatible with DVD, Video and MP3 files and enables passengers to select and change between formats as required. The magazine can hold up to six discs and is easily accessible, with the whole unit located in the side panel of the luggage compartment.

The system is operated using the Bentley branded remote control, with navigation through the various functions via the two 6.5" display screens. Each screen is fully integrated into the rear of the existing head restraints, eliminating the problems associated with the colour match of new interior trim.

In addition, those customers who have a TV tuner fitted, will also be able to watch the DVD on the infotainment screen, with audio projected throughout the car. This function however, will only operate whilst the car is stationary.

A separate auxiliary input, (located in the rear centre console of 4 seat models and on the front of the seat cushion of 5 seat models), enables the use of additional devices such as a games console. Each display screen can be used independently, providing access to both the DVD system and auxiliary device, with simultaneous access to the normal audio system for passengers in the front. Please note, some customers may express a preference to use their own personal wired headphones, which can also be connected to the input panel.

Each of the wireless Bluetooth headphones are branded with the Bentley logo and supplied in an embossed leather bag. These can be secured to the rear of the front seat and offer protective storage for the units. Four batteries are supplied for each device, with a battery charger located in the luggage compartment to ensure continued performance. An additional set of earphones is also provided for 5 seat models travelling with a third passenger.

Please note, this is the only Bentley approved dealer fit system available, and is backed with the normal parts warranty. The product has also undergone extensive testing to ensure full compatibility with all systems in the car.
